1 Introduction

In 1932, it was suggested that the British Association Tables Committee prepare a table of the factors of all numbers less than 100000. Mrs. E. Gifford offered to prepare the manuscript, based on her table of primes and factors [5].[1] A second manuscript was prepared by Miss E. J. Ternouth[2] with the collaboration of A. Lodge.[3] In 1933, J. Peters[4] informed the Committee that he had prepared the copy for such a table several years before. The details of the construction and collation of these three tables are explained in the introduction to the tables written by Leslie J. Comrie.

The resulting table was then compared with various published tables, namely those of Brancker (1668), Chernac (1811), Barlow (1814), Inghirami (1919), Vega (1849), Hinkley (1853), Browne and Sharpe (1929), Jones (1893), and Gifford (1931). Erratas are given for each of these tables.

2 Description of the table

The main table gives the complete decompositions of all integers from 1 to 99999. Each interval of 100 values covers two columns which are located on facing pages. Each double page initially gives the decompositions for ten hundreds, but this number decreases as the decompositions become more involved. At the end of the table, each double page only covers 500 values. These features have been reproduced in our reconstruction. Prime numbers are written in bold face, like in Kaván's table [8].

Appended to the main table is a table giving the reciprocals of primes from 11 to 9973. This table can be used to facilitate the testing of large numbers up to 10^8 and beyond.

Peters *et al.*'s tables were reprinted in 1963.

3 Other tables

Kaván's table [8] published in 1937 is very similar to Peters *et al.*'s, but the decompositions are given up to 255999.

[1] Emma Gifford (1861–1936)'s table published in 1931 gave the complete decompositions of all odd integers not divisible by 3, and 5 from 11 to 100387.

[2] Elsie Jane Ternouth (ca. 1897–1978). She graduated from the University of Glasgow in 1916. She seems to have been a maths lecturer at Reading University in Southern England.

[3] Alfred Lodge (1854–1937) was a professor of mathematics and a member of the British Association for the Advancement of Science Committee on Calculation of Mathematical Tables for nearly fifty years [1].

[4] Johann Theodor (Jean) Peters (1869–1941) published a number of tables, in particular tables of logarithms to 8 places (with Julius Bauschinger) and to 10 places [2]. Archibald wrote that he was *perhaps the greatest mathematical table maker of all time* [3, p. 68].

[5] **Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
