

A reconstruction of  
Beeger's table of primes  
(1951)

Denis Roegel

9 October 2011

# 1 Introduction

In 1946, the “French Association for the Advancement of Sciences” set up a committee in order to extend Lehmer’s table of primes [24]. Lehmer had given the 665000 primes from 1 to 10 006 721, thereby unifying the previous published works of Felkel [12, 13, 14, 15], Chernac [8], Burckhardt [7, 4, 5], Dase [9, 10, 11], Glaisher [16, 17, 18], Kulik [21] and others.

The initial members of the committee were Nicolaas George Wijnand Henri Beeger (1884–1965), André Gérardin (1879–1953), and Luigi Poletti (1864–1967). Later Gérardin could not participate for health reasons and the committee was joined by Albert Gloden (1901–1966) and Robert James Porter (1882–?).

It was decided to compare existing manuscript tables in order to produce a table with no errors. For the beginning, the work was confined to the 11th million (10 000 000 to 11 000 000).

## 2 Sources

The following manuscript tables covering the 11th million were considered:

- Kulik’s table [21]: microfilms were obtained from the Carnegie Institute in Washington for the pages 302–417 of Kulik’s manuscript; these pages covered the values 9 986 101 to 12 665 699;<sup>1</sup>
- Poletti’s table: this table gives the smallest factor of numbers not divisible by 2, 3, or 5; Poletti used fascicles where the smallest factors 7, 11, and 13 were preprinted; these fascicles must therefore extend over a range multiple of  $7 \times 11 \times 13 = 1001$ ;
- Василий Антонович Голубев (V. A. Golubev, 1891–1972)’s table, kept in Moscow;
- two tables by R. J. Porter [29].

Golubev’s table was not seen by the authors, the Steklov Institute in Moscow having denied a request for a copy.

Another partial source for the 11th million was Lehmer’s table of factors which extends to 10 017 000 and for which an additionnal page 477 was published in 1949, extending it to 10 037 999.

Beeger, Gloden, Poletti, and Porter did various verifications and comparisons, as described by Beeger in the 2-page introduction to the table.

## 3 Formatting and reconstruction

Lehmer’s table gave 5000 primes on each page, on 50 columns and 100 lines. Beeger’s table [2] instead splits one of Lehmer’s pages in two pages of 25 columns, thereby producing a table with a more conventional size. Beeger’s table spans 25 pages.

---

<sup>1</sup>Beeger mistakenly wrote that these pages went up to 12 665 701 [2].

Figure 1: The first page of Beeger's table.

Beeger's table was very easy to generate, as it was little more than an adaptation of Lehmer's layout. Compared to Lehmer, Beeger has slightly simplified the entries, in that he only gave the last digit of a prime when the other digits did not change. Lehmer, instead, always gave at least the last two digits. It should be noted that Beeger broke his rule at least once, for the number 10 208 399 which he wrote as 399, but should have written 99.

Although Beeger had not done so, we have added the interval of primes for each page in the header, as did Lehmer.

## References

The following list covers the most important references<sup>2</sup> related to Beeger’s table. Not all items of this list are mentioned in the text, and the sources which have not been seen are marked so. We have added notes about the contents of the articles in certain cases.

<sup>2</sup>**Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
