10-digit interpolations for Bürgi's hypothetical $2''$ sine table

Denis Roegel

2016

(last version: 28 march 2016)

This document is part of the LOCOMAT project:
`http://locomat.loria.fr`

Jost Bürgi's recently rediscovered *Fundamentum Astronomiæ* [3, 4] describes a number of methods for the computation of tables of sines. One algorithm makes it possible to compute accurate values of the sines of a subdivision of the quadrant, but this method can only be used in practice for small subdivisions [11].

Between these computed values, other values can be obtained using a mere interpolation. This is described by Launert [5], but no extensive examples are given. This document aims at filling this gap.

We give here 10 sexagesimal digit interpolations of the sines for every minute of the quadrant and assuming constant third differences. The step of the interpolations is $2''$ and the exact value of the target sine is given at the end of the interpolation. Each interpolation spans one page. For instance, the interpolated value for $\sin 1'$ is 0,1,2,49,54,40,4,19,52,55, whereas the exact (rounded) value is 0,1,2,49,54,40,4,19,36,0.

The sexagesimal values are given such that the *sinus totus* is equal to 60. The last value of the table is therefore 60,0,0,0,0,0,0,0,0,0, corresponding to the sine of 90°. The sine of the first minute corresponds to the modern value $(((((54 + \cdots)/60 + 49)/60 + 2)/60 + 1)/60 + 0)/60 = 0.000290888\ldots$.

Given a modern value of the sine, we can easily obtain its sexagesimal digits by multiplying repeatedly by 60 and taking the fractional parts. The integer parts are the sexagesimal digits. For instance, if we start with $\sin 1'$, we have

$$\begin{aligned}
\sin 1' &= 0.00029088820456\ldots && (1)\\
60\sin 1' &= 0.01745329227380\ldots && (2)\\
&\rightarrow \quad d_0 = 0\\
(60\sin 1' - d_0)\times 60 &= 1.04719753642832\ldots && (3)\\
&\rightarrow \quad d_1 = 1\\
((60\sin 1' - d_0)\times 60 - d_1)\times 60 &= 2.83185218569971\ldots && (4)\\
&\rightarrow \quad d_2 = 2\\
(((60\sin 1' - d_0)\times 60 - d_1)\times 60 - d_2)\times 60 &= 49.91113114198276\ldots && (5)\\
&\rightarrow \quad d_3 = 49\\
((((60\sin 1' - d_0)\times 60 - d_1)\times 60 - d_2)\times 60 - d_3)\times 60 &= 54.66786851896614\ldots && (6)\\
&\rightarrow \quad d_4 = 54
\end{aligned}$$

and we see that the sexagesimal expression of $\sin 1'$ is in fact 0,1,2,49,54,....

The scheme used in our interpolations is the scheme we believe that Bürgi used for interpolating values between pivots of his sine tables, anticipating the methods used by Prony 200 years later [8].

Bürgi's sine table, which is thought lost, and of which we have only vague descriptions, supposedly gave the sines to eight sexagesimal places and for every two seconds of the quadrant. We have reconstructed such a hypothetical table [13], and the interpolations of the present document show that interpolating on 10 digits is sufficient to reach a final accuracy of 8 digits. The number of places as well as the number of differences needed to compute a given accuracy can be obtained from the formulæ given in our analysis of Prony's work, but the purpose here is merely to show in practice that this setting does work. On the other hand, with 9 digits, the expected accuracy is not reached [10].

Finally, one has to keep in mind that not only does the computation of such a table require these 5400 interpolations, but there is also quite some work in determining the initial values of the sines and differences, as alluded in one of our notes [12]. It is therefore quite difficult for us to believe that Bürgi really worked out such a huge table, although we cannot exclude it.

References

The following list covers the most important references[1] related to Bürgi's table. Not all items of this list are mentioned in the text, and the sources which have not been seen are marked so. We have added notes about the contents of the articles in certain cases.

[1] **Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
