# Introduction

*What Briggs did for logarithms of numbers,  
Gunter did for logarithms of trigonometrical functions.*

*Charles H. Cotter [9]*

The first table of decimal logarithms was published by Henry Briggs in 1617 [3]. It contained the decimal logarithms of the first thousand integers. Before that, in 1614, Napier had published tables of “Napierian” logarithms of the sines [24]. Eventually, in 1620, combining these two ideas, Edmund Gunter (1581–1626) was the first to publish a table of decimal logarithms of trigonometric functions. This is the table which is reproduced here.

## 1 Edmund Gunter (1581–1626)

Edmund Gunter<sup>1</sup> studied at Oxford and became famous for several inventions, in particular for the sector invented in 1606 [18, 40, 48]. Around 1606, after having written an account of a “New projection of the sphere,” he became friends with Henry Briggs [9, p. 363]. Gunter eventually became professor of astronomy at Gresham college in London in 1619 [46].<sup>2</sup> In 1620, he had the idea of putting a logarithmic scale on a rule, which later was developed into a slide rule.<sup>3</sup> After Gunter’s death, Henry Gellibrand (1597–1637) became professor of astronomy at Gresham college.

Gunter’s *Canon triangulorum* [17]<sup>4</sup> published in 1620 gives the logarithms of the sines and tangents with seven decimal places for every minute of the quadrant, semi-quadrantically arranged. Gunter does not explain how he obtained the logarithms of the sines and tangents and we can only theorize that he used a variant of the radix method later described in detail by Briggs [4]. He must have used the sines from a prior table, perhaps the *Opus palatinum* [28] or the *Thesaurus mathematicus* [27], and computed their logarithms.

---

<sup>1</sup>For good biographical summaries of Gunter, see Cotter [9] and Gray [16].

<sup>2</sup>Gresham College was a very fluctuating institution, and the main reason for its claim to scientific responsibility was the work and influence of Briggs. The flourishing period of Gresham College ended with the death of Henry Gellibrand in 1636 [1, p. 20].

<sup>3</sup>We refer the reader to our study on Napier for more details on the origins of slide rules [35]. See also the articles by Robertson [29] and Nicholson [25].

<sup>4</sup>There was apparently also an English edition, perhaps published in 1620 or 1623, but we have not seen it.

Gunter of course needed to compute the logarithms of sines only from  $45^\circ$  to  $90^\circ$ , hence a total of  $45 \times 60 = 2700$  logarithms, which could have been computed easily in less than a year. Then, once  $\log \sin \alpha$  had been computed for  $\alpha \geq 45^\circ$ , Gunter may have used the relation  $\log \sin \alpha = \log \sin 2\alpha + \log \sin 30^\circ - \log \sin(90^\circ - \alpha)$  for  $\alpha < 45^\circ$  and the logarithms of tangents could have been obtained with  $\log \tan \alpha = \log \sin \alpha - \log \sin(90^\circ - \alpha)$ . By restricting the calculations of the logarithms to an octant, the calculation of the other logarithms introduces errors which accumulate, and perhaps Gunter did not use this method.<sup>5</sup>

Although Gunter's table does not name the cosine and cotangent functions, it also gives their logarithms, since  $\log \cos \alpha = \log \sin(90^\circ - \alpha)$  and  $\log \cot \alpha = \log \tan(90^\circ - \alpha)$ . The cosines and cotangent are only named in the introduction, and this is the first printed use of these words [15, p. 187].

After the publication of his table, Gunter may have been one of the computers who assisted Briggs in the computation of the *Arithmetica logarithmica* published in 1624 or of its planned extension by Briggs [13, p. 381].

A translation of Gunter's table was published in Dutch in 1626 (see [32]) and the table was extended by Vlacq in 1628 in his *Arithmetica logarithmica* [43] (every minute of the quadrant and to 10 places) and in 1633 in his *Trigonometria artificialis* [44] (every 10 seconds and also to 10 places).

## 2 Structure of the table and recomputation

The structure of the table is straightforward. One page covers half a degree and gives the logarithms of the sines and tangents. The first line of the first page is a special case. Gunter's table gives  $\log \sin 0 = \log \tan 0 = 0$ , but *Infinitum* only for  $\log \tan 90^\circ$ . In our reconstruction, we have written *Infinitum* in all three cases, not distinguishing between  $-\infty$  and  $\infty$ . Gunter's table also contains minor errors, and these errors have not been reproduced. Our reconstruction is therefore not a facsimile, but an “ideal” table.

Although the sines of the quadrant were considered between 0 and 1, and the conventions of the decimal logarithms were well established by Briggs in his first table [3], Gunter actually did not give the values of  $\log \sin x$  and  $\log \tan x$ , but “shifted” values of the logarithms. These values can best be viewed as the logarithms of the scaled sines and tangents. The scale factor in this case is  $10^{10}$  and is unrelated to the number of decimal places in the table. By using such a scale factor, and in fact by considering that the whole sine has a logarithm of 10 (or the radius  $10^{10}$ ), all logarithms are positive and the characteristics of all the logarithms of the sines have only one digit, except for the whole sine. The characteristics of the logarithms of the tangents are 10

---

<sup>5</sup>The accumulation of errors was also described later by Prony [38].

or more in the second half of the quadrant. This convention was later used by Briggs in his *Trigonometria britannica* [5]. It should be noted, in particular, that the cover of Gunter's book gives the radius as  $10^8$ , as observed by van Poelje [42].

For instance,  $\log \sin 1^\circ = -1.758144\dots$ ,  $10 + \log \sin 1^\circ = 8.241855\dots$  and Gunter's table contains 82418553.

For the cotangents, since they are greater than 1, the table contains 9 digit values. For instance,  $\log \cot 0^\circ.5 = 2.05914160\dots$  and Gunter's table gives the value 120591415.

In our reconstruction, the table has been enlarged, the original book having the dimensions 9 cm  $\times$  14.4 cm, that is, less than a fourth of an A4 page.

The table was recomputed using the GNU `mpfr` multiple-precision floating-point library developed at INRIA [12], and gives the exact values. The comparison of our table and Gunter's will therefore immediately show where Gunter's table contains errors.

| M  | <i>Sin.</i> O   |      | <i>Tan.</i> O |                 |        |

<sup>6</sup>**Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.

Gunter's table (reconstruction, D. Roegel, 2010)

# Lectori practicæ Mathe- seos studioso S. P.

CAnon noster vsum habet, in triangulorū sphæricum solutione eundem quem tabulae sinuum rectorum & tangentium ab alijs editæ, sed prixin paulò faciliorem. Nam eorum multiplicationem per additionem, eorum diuisionem per subtractionem euitamus. Nex pluribus opus est aut præceptis aut exemplis. Idem si desideres in triangulis rectilinejs, adiunge nostris, Amici & Collegæ *Henrici Briggy Logarithmos*. Nam enitimus fundamento, eodem utimur operandi modo.

Vale & si hæc tibi grata fuerint, plura a nobis in hoc genere expecta.

*FINIS.*
