Mouton's table of logarithms and its extensions (ca. 1670)

Denis Roegel

2 January 2012

This document is part of the LOCOMAT project:

1 Introduction

Gabriel Mouton (1618–1694) was a French abbot and scientist. In 1670, he published his book *Observationes diametrorum solis et lunæ apparentium* [16] in which he developed his ideas on interpolation.

It was perhaps at this time that Mouton constructed an extension of Vlacq's *Trigonometria artificialis* [21]. Vlacq's table gave the logarithms of sines, cosines, tangents and cotangents for every ten seconds of the quadrant and to ten places.

Mouton's table gave the same logarithms, but for every second of the first four degrees of the quadrant. Mouton's original manuscript is located at the library of the *Institut* in Paris.[1] There are apparently at least two other copies of this manuscript,[2] but we have not seen them and we do not know where they are located.[3]

Mouton's table follows Vlacq's layout very faithfully. The table is totally handwritten and uses no printed forms. The copy at the *Institut* contains an additional page giving the logarithms for the first minute of the fifth degree. This page was not computed by Mouton, but by Jean-Louis Guérin.[4]

2 The accuracy of Mouton's table

An examination of Mouton's table shows that his table is surprisingly accurate. We have compared several dozens of values, and we were unable to find any error. For instance, the first page of Mouton's table (from $0'$ to $1'$) gives 240 correct values, for the logarithms of sines, cosines, tangents and cotangents. The values are correctly rounded to ten places. We have not checked the differences, but they are presumably also correct.

[1] Ms. 921.

[2] At the beginning of the manuscript, there are two notes: 1) "Ce manuscrit est précieux de Gabriel Mouton, de Lyon, appartient à l'Académie Royale des Sciences de Paris, et M. Cartauld est prié de le renvoyer aussitôt qu'il le pourra à M. de la Lande [rue St. Honoré près la croix du tralsoin (???)] place du palais Royal, chez M. Lepaute, 16 de.1772. [Le manuscrit est à renvoyer à M. De la Lande, la copie ayant été finie et vérifiée le 18. 8bre 1772. M. Guérin luy fait mil complimens et le prie de luy en accuser (???) la Reception (???)]. M. Cartauld s'en est servi pour collationner l'édition de Gardiner d'Avignon en 1773. M. Guerin y a ajouté la 1e minute du 5e degré." (parts between brackets are striked out, and question marks are uncertain readings), 2) "Ce manuscript appartient à l'academie des sciences. Il y en a trois copies ; une de M. de Mairan qui est en Pologne dans la bibliothèque du comte Villarski (???), une de M. Maraldi qui est à l'observatoire, et une de M. Guerin receveur des tailles à Amboise, qui ayant calculé le 5e degré en a copié la première minute à la fin de ce manuscrit, en 1772. J'ai fait imprimer à Avignon dans la nouvelle édition de Gardiner 1770 les sinus et les tangentes à 8 chiffres seulement d'après ce manuscrit. De la Lande. En 1787 j'en ai fait faire une cinquième. J'ai une table de 90 degrés pour toutes les secondes, calculées par M. Robert, à 8 chiffres en 2 vol. in folio 1785. M. Taylor en Angleterre en a fait imprimer une pareille." The manuscript also bears the name "Cassini de Thury" and right at the end of the table, there is a third note reading "La première minute du 5e degré a été calculée en 1772 par M. Guerin à Amboise qui a calculé le 5e degré en entier."

[3] In the second edition of his *Astronomie* [3], published in 1771, Lalande wrote that Maraldi (probably Giovanni Domenico Maraldi (1709–1788)) had a copy of the table. The same year, he wrote that Jean-Jacques Dortous de Mairan (1678–1771) and Maraldi had copies [4]. But in the third edition, published in 1792 [5], he wrote that he and Cassini (probably César-François Cassini de Thury (1714–1784), called "Cassini de Thury") have copies of Mouton's table. It is possible that one or more copies are among Cassini and Lalande's papers in the archives of the Paris observatory.

[4] Guérin (1732–????) was "receveur des tailles" (tax collector) and later mayor of the city of Amboise. He also assisted Lalande on the computation of ephemerides [6, p. 539].

The cotangents from $1°1'$ to $1°2'$ are also correct, and so are the sines from $3°56'$ to $3°57'$, as well as the sines and tangents from $3°58'$ to $3°59'$.

Contrasting with the first four degrees, the values from $4°0'$ to $4°1'$ display many errors, so that this alone shows that the computations were not done with the same rigor. Indeed, we know that the entire fifth degree was computed by Guérin, perhaps under the supervision of Lalande.

3 The source of Mouton's table

Given the high accuracy of Mouton's table, it is natural to ask what was Mouton's source. At first, it is tempting to assume that Mouton interpolated between Vlacq's values, especially since Vlacq's layout was used. But this cannot be the case, for the values given by Vlacq for every 10 seconds often differ from those given by Mouton. For instance, for $3°58'20''$, Vlacq gives $\log\sin = \ldots 480$ (instead of $\ldots 482$), for $3°58'50''$, Vlacq gives $\log\sin = \ldots 391$ (instead of $\ldots 394$), and so on. About every other value given by Vlacq is slightly wrong, but none of these errors show up in Mouton's table.

If Mouton did not recompute these values, he must then have obtained them from elsewhere. The only possible source would then be Briggs' table. But Briggs' table does not use a sexagesimal division and Briggs gives his values every 100th of a degree, that is, every 36 seconds. So, if Mouton used Briggs' table, he must have interpolated his values every 36 seconds. This interval, however, is too large for an interpolation at the beginning of the logarithms of sines, for instance. At the end of the fourth degree, at least third differences would be needed to obtain ten correct decimal places, and the third differences would be far from sufficient at the beginning of the table.

Mouton could however have computed the logarithms of cosines that way, as they vary only very slowly, but he would also not have been able to obtain their values at 14 places from Briggs' table, because he would have needed to use Briggs' logarithms of tangents, which are only given to 10 places.

It therefore seems that Mouton did not even use Briggs' values for the logarithms of sines, cosines, tangents and cotangents published in his *Trigonometria britannica* [1], but recomputed a number of values very accurately, perhaps every six seconds. This interval would have enabled him to compare his values with those of Briggs. Computing these values may have been done using Briggs' methods, who first computed a number of sines, then their logarithms using the radix method.

Once Mouton had obtained accurate values of the logarithms of sines perhaps every six seconds, he may have subtabulated these intervals using Briggs' method.

In any case, Mouton was of course wise not to use Vlacq's table, since even if Vlacq's values had been correct, Mouton would never have been able to come up with such accurate tables. Every value in Vlacq's table might have been wrong by as much as half a unit of the last place, and such errors would also take place on interpolated values. For the interval from $3°58'$ to $3°59'$, five of Vlacq's seven logarithms of sines, and five of Vlacq's logarithms of tangents are incorrect, with the greatest errors being for $\log\sin 3°58'50''$ and $\log\tan 3°58'50''$ (3 units of the tenth place in each case).[5]

The last page of Mouton's table is an addition by Jean-Louis Guérin, and almost every logarithm is given incorrectly. For instance, from $4°0'4''$ to $4°0'13''$, the last digits

[5]Incidentally, this suggests that Vlacq's errors are not independent, but correlated, and this should certainly be investigated further.

of the logarithms of sines in the table are 429, 438, 426, 393, 339, 264, 168, 051, 913 and 754. These values are all incorrect, the correct digits being 430, 439, 427, 394, 340, 265, 169, 052, 914, 756. Moreover, the value for $4°0'10''$ in the table even differs from Vlacq's value which is 167, and this also appears to be the case for other angles. We can therefore conclude that this additionnal page was also not based on Vlacq's table, but was nevertheless computed much less accurately than Mouton's main table. It might be of some interest to try to find the origin of the errors in this page, but we have not investigated the matter.

4 Further tables to one-second steps

After Mouton's work, several other tables were given to one-second intervals. Perhaps the first such table was Gardiner's, who in 1742 gave the sines to every second and to seven places for the first 72 minutes of the quadrant [9].

Gardiner's original table was not based on Mouton's, but the second edition edited by Pézenas and published in 1770 was [10].[6] In fact, Lalande wrote [5] that he had communicated Mouton's table to Pézenas [2, pp. 549–550]. It is however not clear if Lalande lent his copy, or if Pézenas used the copy at the Institut, which is acknowledged in the introduction of the tables. In any case, Pézenas' table uses the same layout as the one used by Gardiner in 1742, but the table was extended to the first four degrees.

In the notes added to Mouton's table, Lalande mentions a table by a certain Robert and giving the logarithms for every second of the quadrant, to eight places (probably including the characteristic). This table was completed in 1785 and occupies two volumes.

In 1792, Michael Taylor [19] published a table giving the logarithms for every second of the quadrant, also only to 7 places, and perhaps based on Pézenas' table. In any case, Taylor did not mention Mouton's table.

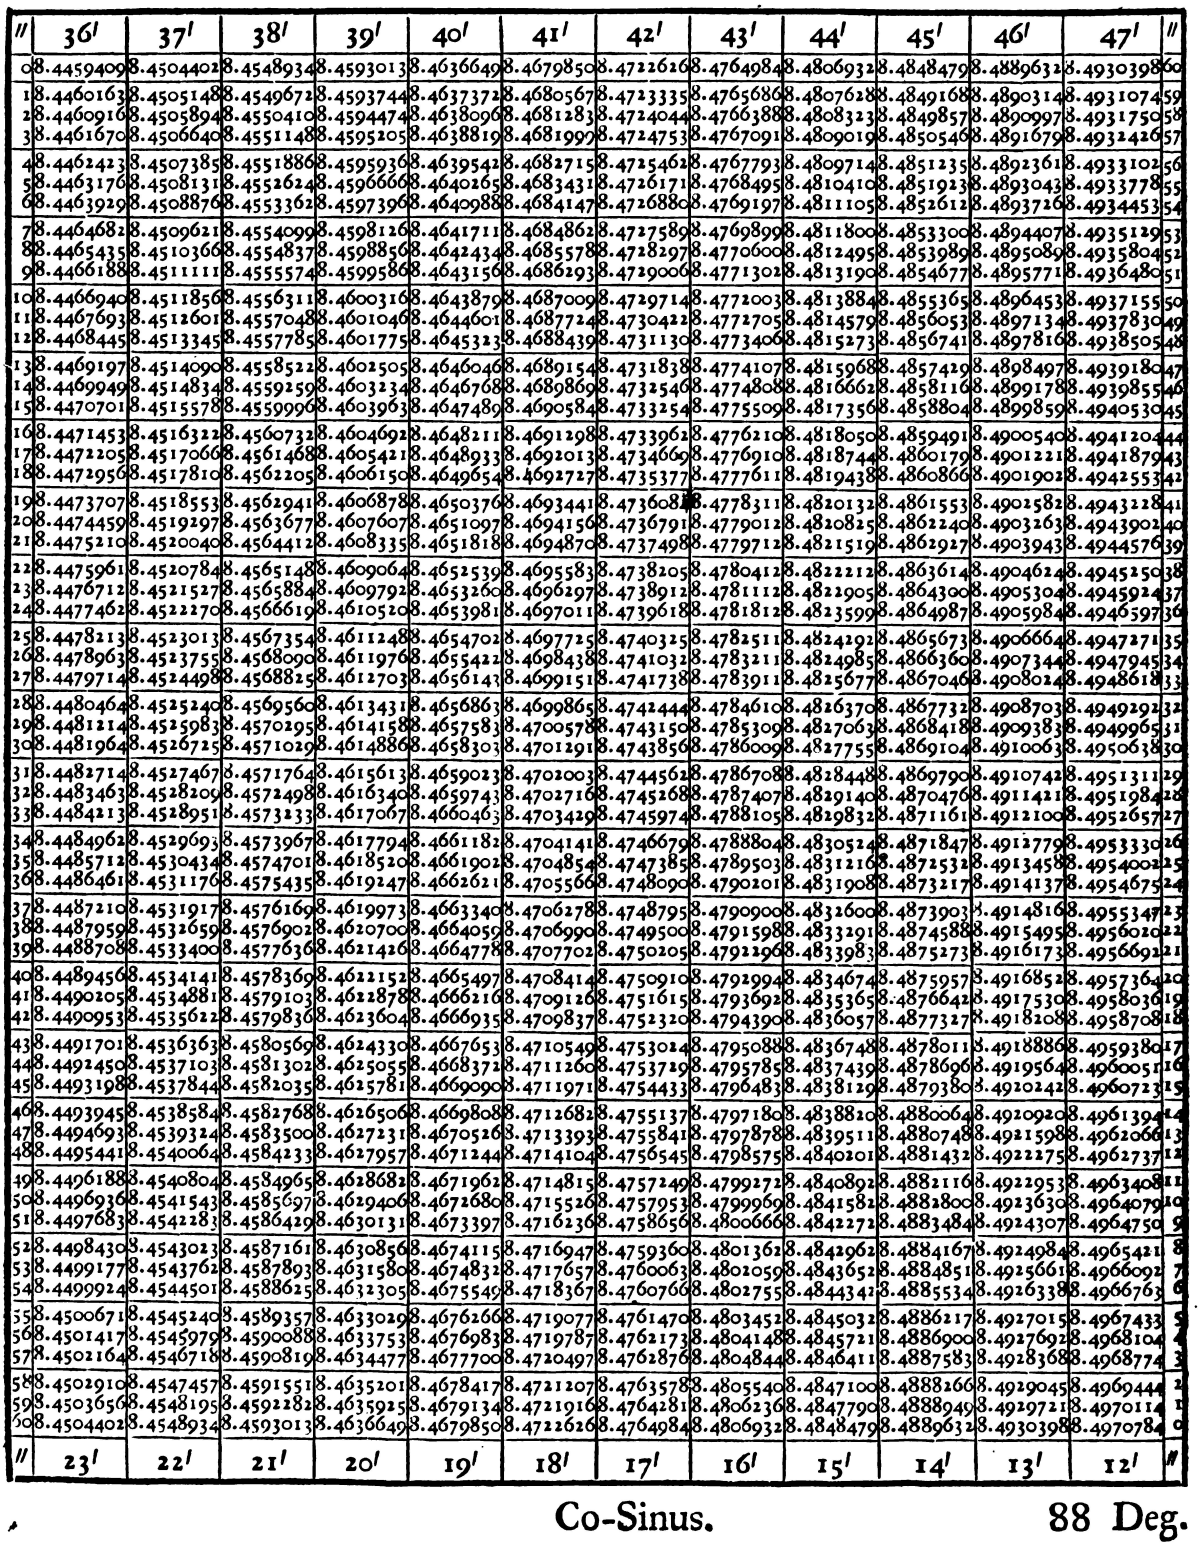
In 1794, Vega published his *Thesaurus logarithmorum completus* [20][7] which contained the logarithms of sines, cosines, tangents and cotangents for every second of the first two degrees and to ten places. The remaining part of the quadrant was borrowed and corrected from Vlacq's table, but the first two degrees had been computed by Captain Friedrich Dorfmund.[8] As a simple comparison shows, there are a number of discrepancies with Mouton's table, and Vega's is not as accurate as Mouton's.

5 Reconstruction

The tables were recomputed using the GNU `mpfr` multiple-precision floating-point library developed at INRIA [8], and give the exact values. We have moreover extended Mouton's table to the entire semi-quadrant.

[6] The handwritten note given above mentions the work of a Mr. Courtauld on the 1773 Avignon edition, but this must refer to the 1770 edition. Who this Mr. Courtauld was is not known.

[7] See Glaisher [12, pp. 138–139] for a short description of Vega's table and an appraisal of its accuracy. Gauss has also made some error analysis of Vega's tables, but perhaps not clearly distinguishing between the work of Dorfmund and that of Vega [11].



[8] Vega writes that Dorfmund was *Lieutenant des kayserl. königl. Artilleriekorps* and that he was willing to compute the logarithms beyond the second degree [20, p. XXI].

Figure 3: Excerpt of Vega's table (1794).

References

The following list covers the most important references[9] related to Mouton's table. Not all items of this list are mentioned in the text, and the sources which have not been seen are marked so. We have added notes about the contents of the articles in certain cases.

[1] Henry Briggs and Henry Gellibrand. *Trigonometria Britannica.* Gouda: Pieter Rammazeyn, 1633. [The tables were reconstructed by D. Roegel in 2010 [18].]

[2] Augustin de Backer and Aloïs de Backer. *Bibliothèque des écrivains de la Compagnie de Jésus, etc.* Liége: L. Grandmont-Donders, 1858.

[3] Joseph-Jérôme Lefrançois de Lalande. *Astronomie*, volume 1. Paris: Veuve Desaint, 1771. [Second edition. A notice on Mouton appears on page 208.]

[4] Joseph-Jérôme Lefrançois de Lalande. Lettre sur des tables de sinus extrêmement rares. *Journal des Sçavans*, 55(2):291–303, October 1771.

[5] Joseph-Jérôme Lefrançois de Lalande. *Astronomie*, volume 1. Paris: Veuve Desaint, 1792. [Third edition. A notice on Mouton appears on page 165.]

[6] Joseph-Jérôme Lefrançois de Lalande. *Bibliographie astronomique ; avec l'histoire de l'astronomie depuis 1781 jusqu'à 1802.* Paris: Imprimerie de la République, 1803.

[7] Jean-Baptiste Joseph Delambre. *Histoire de l'astronomie moderne.* Paris: Veuve Courcier, 1821. [two volumes, see especially volume 2 on Mouton]

[8] Laurent Fousse, Guillaume Hanrot, Vincent Lefèvre, Patrick Pélissier, and Paul Zimmermann. MPFR: A multiple-precision binary floating-point library with correct rounding. *ACM Transactions on Mathematical Software*, 33(2), 2007.

[9] William Gardiner. *Tables of logarithms, for all numbers from 1 to 102100, and for the sines and tangents to every ten seconds of each degree in the quadrant; as also, for the sines of the first 72 minutes to every single second: with other useful and necessary tables.* London: G. Smith, 1742.

[10] William Gardiner. *Tables de logarithmes, contenant les logarithmes des nombres, depuis 1 jusqu'à 102100, & les logarithmes des sinus & des tangentes, de 10 en 10 secondes, pour chaque degré du quart de cercle, avec différentes autres tables, publiées ci-devant en Angleterre. Nouvelle édition, augmentée des logarithmes des sinus & tangentes, pour chaque seconde des quatre premiers degrés.* Avignon: J. Aubert, 1770. [edited by Esprit Pézenas]

[9] **Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.

[11] Carl Friedrich Gauss. Einige Bemerkungen zu *Vega*'s Thesaurus Logarithmorum. *Astronomische Nachrichten*, 32(756):181–188, 1851.
