Peters's tables of multiplication and interpolation

Johann Theodor Peters (1869–1941) was a German astronomer and computer of mathematical and astronomical tables. In 1910 and 1911, together with Julius Bauschinger, he published the first widely available 8-place table of logarithms [15]. This work was the basis of many later tables, most of which have been reconstructed by us.[1]

Many tables of logarithms or other functions contain tables facilitating the interpolation between values of the table. These tables provide the fractions of a number of differences. For instance, if the difference between two values is 214, it is useful to have the multiples of 21.4 and these multiples are often given in small tables spread in the margins of the main tables.

Since these tables recur often, Peters published a comprehensive set of interpolation tables giving the fractions of 1, 2, until 999. This set of table was published as an appendix to Peters's 6-place table published in 1930 [49], but it was also published separately. The present document is a reconstruction of this table.

These tables can be used for interpolations in other tables, but they can also be used as tables of multiplication, since they give the first nine multiples of all integers from 1 to 999. There are of course many other more comprehensive tables of multiplication, including a large one by Peters published in 1909 [34]. We refer the reader to the reconstruction of that table for further references on tables of multiplication.

[1] For more information on Peters's tables, we refer the reader to our summary [90].

[2] **Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
